

Azaleas, Camellias, Rhododendrons and Gardenias

Azaleas and *Camellias* require an acidic soil environment, high in organic matter, with constant moisture, good drainage and filtered light.

Azalea and Camellia Food has been specifically blended to meet the requirements of *Azaleas*, *Camellias*, *Rhododendrons*, *Daphnes* and *Gardenias*. It is an organically based formulation that contains a complete range of nutrients, including trace elements.

Azalea and Camellia Food is available in 20kg pack size.

How Much to Apply

Young plants require the application of 25 grams per square metre 4 times per year, in August, October, December and March for best results.

Established plants require the application of 50 grams (small plants) to 75 grams (large plants) per square metre, 4 times per year, in August, October, December and March for best results.

One adult handful is approximately 50 grams, while one matchbox full is approximately 25 grams.

How to Apply

Apply to the drip zone of the plant and very lightly trickle the formula into the soil surface or cover with organic matter. Be careful not to damage the shallow root system. Water well after application.
