

Olives

Olives are suited to a Mediterranean climate with dry summers and cool winters. The optimum pH is approximately 6.5 - 7.5.

Native Plant Food supplies 9.2% Nitrogen, 2.3% Phosphorus and 5.7% Potassium plus trace elements. There are many nutrition programs for olives, however an application in Spring, Summer and Autumn should be enough for a granular fertilizer.

A good soluble fertilizer especially for younger trees is **Nutrafeed 23**.
