

Ornamental Flowers

Ornamental flowers vary enormously in their soil, climate and nutritional requirements. Generally, ornamentals will require a pre-plant fertilizer such as [Amgrow Kikstart®](#) or [Blood & Bone + K](#) and, depending on the life of the crops, may require a soluble feed or side dressing with a product such as [Nutrafeed 23](#) (soluble) or a general fertilizer mix e.g. [Multipurpose](#). Many ornamentals would benefit from an application of [Multicote Controlled Release](#) (products available from a 4 month to a 12 month release).
